

***AGRICULTURAL STATISTICS
AT A GLANCE
TELANGANA 2014-15***

DIRECTORATE OF ECONOMICS AND STATISTICS
GOVERNMENT OF TELANGANA
HYDERABAD—500 004

Dr.V.SUBRAMANYAM
M.Sc. (Stat) Ph.D
Director

P R E F A C E

The Directorate of Economics and Statistics Hyderabad is releasing the publication of " Agricultural Statistics at a Glance " every year , It gives a broad sketch of the Agricultural scenario in the state during the year. It covers the Rainfall , Seasonal conditions, Area, Productivity and Production of crops, Land Utilization particulars and other information relating to Agriculture. The Publication of Agricultural Statistics at a Glance 2014-15 is second in Series.

In this Publication the information pertaining to Time Series data on Rainfall , Crop wise and Season wise Irrigated / Un-irrigated Areas, Productivity and Production particulars of crops category wise Number and Area of Operational Holdings, Methodology for general crop estimation surveys on food and non-food crops. Live Stock Population, Production of Milk, Eggs and wool, Fish, Prawn production and achievements under procurement of Rice, Gross State Domestic Product of Agriculture sector , Implementation of Crop Insurance Scheme in the State , Inter State Comparison of Area, Yield , Production of Important Crops and other information relating to Agriculture.

This publication is released in hard copy and soft also placed electronically on the website of Directorate of Economics and Statistics , Telangana, Hyderabad with a view to ensure wider circulation of the Publication.

I hope that this Publication will be useful to the policy makers, planners , Administrators , Research scholars who are dealing with Agricultural Statistics and it is also useful to others who are interested in Agricultural Statistics .

I wish to record my sincere appreciation to the Officers and Staff of Agricultural Section , other related Sections of Directorate of Economics and Statistics , Telangana & various departments who provided the data in bringing out the publication within a short time after finalization of yield data on 31-07-2015.

Constructive Suggestions to improve the Quality and content will be appreciated.

HYDERABAD
Date : 31- 10 -2015

Overview

The Economy of Telangana is mainly driven by agriculture. The better performance of this sector is vital for inclusive growth. Sustainable growth in Agriculture continues to be core agenda of the Government. In Telangana state, it mainly depends to a significant extent on the ground water and rainfed. As nearly 55.49 percent of the State's population is dependent on some form of farm activity for their livelihoods, it is imperative to increase the farm incomes and ensuring sustainable growth to reduce poverty. Paddy is the major food crop and staple food of the state. Other important crops grown are Maize, Jowar, Redgram, Greengram, Bengalgram, Soyabean, Mango, Cotton, Chillies, Sugarcane etc., and agriculture has been the chief source of income for the state's economy.

CLIMATE: Telangana state is geographically located in a semi-arid area and has a predominantly hot and dry climate. Summer starts in March and peak in May with average high temperatures in the 42 °C (108 °F) range. The monsoons enter in the state in June and lasts until September with about 713 mm of precipitation ending south west monsoon . A dry, mild winter starts in late November and lasts until early February with little humidity and average temperatures in the 22–23 °C (72–73 °F) range. This area is also prone to hailstorms in the month of April and May, some times.

RAINFALL: The rainfall in the state is erratic, uncertain and distribution of the rainfall is uneven in various Mandals, thus, making agriculture a proverbial gamble in monsoon.

NON-AGRICULTURAL USE: The exploitation of agricultural land is ever increasing through industrialization, urbanization, housing, infrastructure and others. All these factors are compelling for conversion of agricultural land to non-agricultural uses. The scope for expansion of the area available for cultivation has come down, ultimately, there is decrease in net area sown.

1.1 AGRICULTURE GSDP: The agriculture and allied sectors contributed approximately 12.8% of State's GSDP (at constant 2004-05 prices) during 2014-15. Gross State Domestic Product (GSDP) of agriculture and allied sectors and its share in total GSDP of the State during the last 5 years, at constant 2004-05 prices is as follows:

AGRICULTURAL STATISTICS AT A GLANCE TELANGANA 2014-15

(Rs. In Crore)

Items	Year				
	2010-11	2011-12	2012-13	2013-14	2014-15
GSDP of Agriculture and allied Sectors	25,858	25,765	28,726	31,136	27,926
% to Total GDSP	14.8	13.6	14.6	15.1	12.8

GROWTH RATE: Growth (over the previous year) in the total GSDP and that agriculture and allied sector in the GSDP at constant 2004-05 prices is given below:

(In percent)

YEAR	2007-08	2008-09	2009-10	2010-11	2011-12 (TRE)	2012-13 (SRE)	2013-14 (FRE)	2014-15 (AE)
GSDP	10.6	13.4	1.1	18.0	8.7	4.1	4.8	5.3
Agriculture & Allied Sector	16.3	6.0	-12.5	19.4	-0.4	11.5	8.4	-10.3

- **At Constant Prices:** The gross state domestic product (GSDP) of 2014-15 (AE) at constant prices stood at Rs. 2,17,432 Crores with growth rate of 5.3%. The negative growth of 10.3% recorded in agriculture and allied sector, attributed mainly to the adverse seasonal conditions during the year.
- **At Current Prices:** As per the advanced estimates, the Gross State Domestic Product (GSDP) growth of the State during 2014-15 is estimated at 5.3%, as compared to the growth rate of 4.8% recorded in 2013-14, at constant prices of 2004-05. This marks a reversal of the declining trend registered during the past three years. Though agricultural growth suffered a decline during the last year due to adverse seasonal conditions.

The Directorate releases estimates of area, production and yield in respect of principal crops of food grains, oilseeds, sugarcane, fibers and important commercial and horticulture crops. These crops together account nearly 80% of agricultural output. In addition to agricultural statistics, the Directorate also collects Rainfall statistics. The estimates of crop production are obtained by multiplication of area estimates by corresponding yield estimates. The estimates of area and yield rates assume prime importance in the entire gamut of agricultural statistics.

HIGHLIGHTS

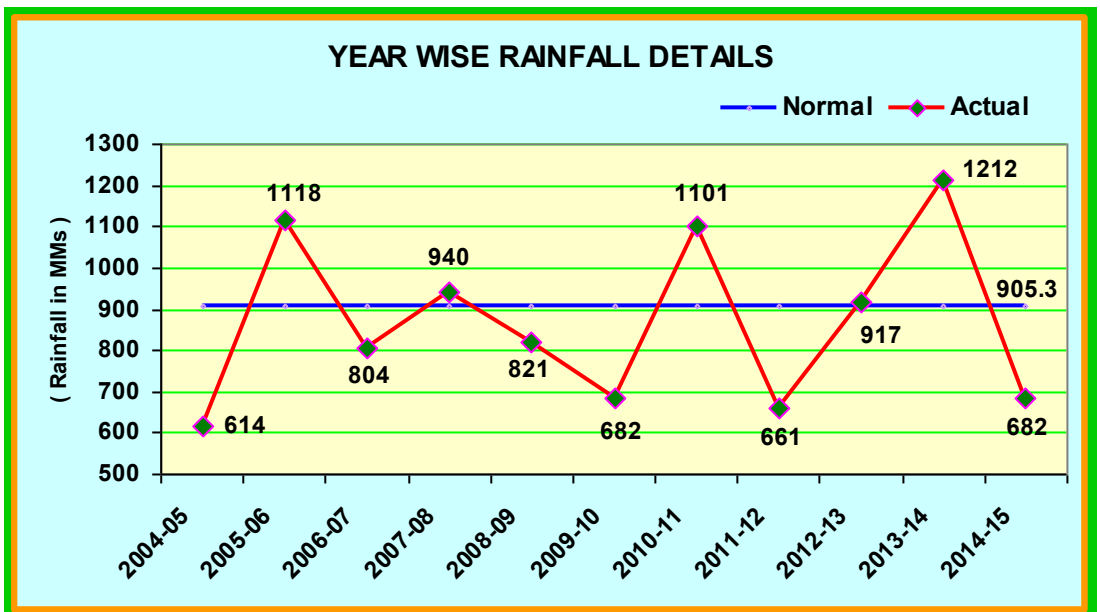

- *State received an average annual rainfall of 682.1 mm during the year 2014-15, with the deficit of 25 % over the normal rainfall of 905.3 mm.*
- *The Gross Area Sown in the State during 2014-15 is 53.15 Lakh Hectares as against 62.44 Lakh Hectares in 2013-14, showing a decrease of 14.88 % over previous year.*
- *The Net Area Sown in the State during the year 2014-15 is 43.77 Lakh Hectares as against 49.23 Lakh Hectares in 2013-14, showing a decrease of 11.09 % over previous year.*
- *The total production of Foodgrains in the State is 72.18 Lakh Tonnes in 2014-15 as against 106.86 Lakh Tonnes in 2013-14 showing a decrease of 32.45%. The production of food grains in 2014-15 has decreased due to decrease of Area and Productivity of Paddy, Maize, Redgram and other foodgrain crops.*
- *The Oilseeds production during 2014-15 was 7.22 Lakh Tonnes as against 8.79 Lakh Tones during 2013-14 registering a decrease of 17.86 % , this is mainly due to decrease in Areas and Productivity during the current year i.e., 2014-15.*
- *The cropping intensity for the year 2014-15 decreased to 1.21 from 1.27 in 2013-14, showing a decrease of 4.72 % over previous year.*
- *The Gross Area irrigated by all sources during the year 2014-15 is 25.29 lakh hectares. This accounted for 47.58% of the gross cropped area as against 50.52% during 2013-14.*
- *Rice and Maize are the Main food grain crops which together accounted for 80.64 % of the total area under food grain crops during 2014-2015.*
- *Total production of rice in the state is estimated at 45.45 lakh tones, which is lower by 20.36lakh tones when compare the last year's production of 65.81 lakh tonnes.*
- *Production of Maize estimated as 23.08 lakh tonnes is also a lower production when compare to the previous year production of 35.12 lakh tonnes during 2013-14.*
- *Rice and Maize are the Main food grain crops which together accounted for 94.94 % of the total Production under food grain crops during 2014-15.*

RAINFALL STATISTICS

The annual normal rainfall in the state is 905.3mm, 80 percent of which is received from the south-west monsoon (June-September). On observing the rainfall pattern during the period from 2004-05 to 2013-14

- 614 mm annual rainfall registered in 2004-05 was lowest.
- 1212.2 mm annual rainfall received in 2013-14 was the highest.

Year wise details of Actual and Normal rainfall are depicted in the following Graph.

PRE-MONSOON RAINFALL:

During the month of May 2014, the state received an average rainfall of 62.8 mm. as against the normal rainfall of 29.8 mm, excess being 111 %. All districts have received excess Rainfall except Medak district, in Medak district normal rainfall was received.

Rainfall Situation in 2014-15: State received an average annual rainfall of 682.1 mm during the year 2014-15, with the deficit of 25 % over the normal rainfall of 905.3 mm. One observation worthy to note is that the quantum and spread was not uniform across the districts. A disparate trend is noticed between the four monsoon periods. It has a direct bearing on the area brought under the plough and production obtained.

THE SEASON WISE RAINFALL DURING THE YEAR 2014-15

Sl. No.	Normal	2014-15	2013-14	% of Deviation.	Status
South- West Monsoon (June to September)					
1	713.5	494.7	851.5	-31	Deficit
North-East Monsoon (October to December)					
2	129.5	54.4	243.2	-58	Deficit
Winter Period (January to February)					
3	11.5	13	1.3	13	Normal
Hot Weather period (March to May)					
4	50.8	120	116.2	136	Excess
Total	905.3	682.1	1212.2	-25	Deficit

On comparison of rainfall recorded during 2014-15 with the annual normal rainfall, normal rainfall was recorded only in Rangareddy and Mahabubnagar districts and deficit rainfall was recorded in remaining 8 districts of the state.

- Out of 459 Mandals in the State, 142 Mandals received normal rainfall, excess in 21 Mandals, deficient in 289 Mandals and scanty in 7 Mandals.

SOUTH-WEST MONSOON: (June - September 2014)

During the South–West Monsoon season, Telangana State recorded an average rainfall of 494.7 mm. with the deficit of 31% when compared to the normal rainfall of 713.5 mm. On Comparison of rainfall recorded during the South-West Monsoon season , normal rainfall was received only in Mahabubnagar District, in remaining 9 Districts registered deficit rainfall.

The month wise rainfall during South West monsoon period during 2014-15

Sl.No.	Month	Normal	Actual	% of Dev.
1	June	127.6	54.2	-58
2	July	238.0	138.6	-42
3	August	218.7	181.1	-17
4	September	129.2	120.8	-7
Total		713.5	494.7	-31

GRAPH: SOUTH-WEST MONSOON RAINFALL FROM 2004-05 TO 2014-15

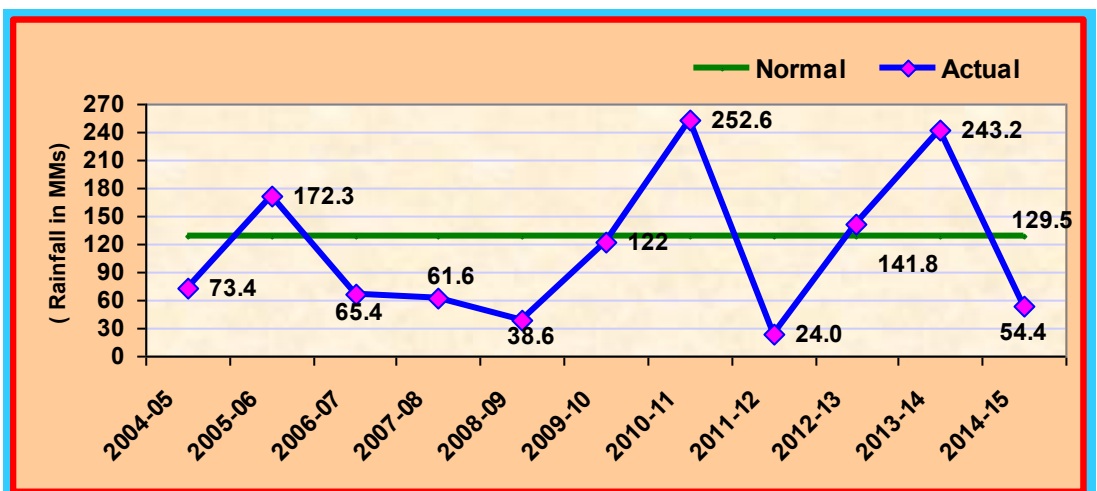

NORTH EAST MONSOON, 2014-15 (October-December 2014)

During the North-East Monsoon season, Telangana state recorded an average rainfall of 54.4 mm. with deficit of 58%,when compared to the normal rainfall of 129.5 mm. On comparison of rainfall recorded during the North-East Monsoon season , Normal Rainfall recorded at Khammam District only, Deficit Rainfall recorded in Rangareddy, Mahabubnagar, Nalgonda and Hyderabad Districts and Scanty Rainfall recorded in Adilabad, Nizamabad, Karimnagar, Medak and Warangal Districts.

THE MONTH WISE RAINFALL DURING NORTH EAST MONSOON 2014-15

Sl.No	Month	Normal	Actual	% of Deviation
1	October'14	98.7	39.6	-60
2	November'14	25.3	13.2	-48
3	December'14	5.5	1.6	-71
Total		129.5	54.4	-58

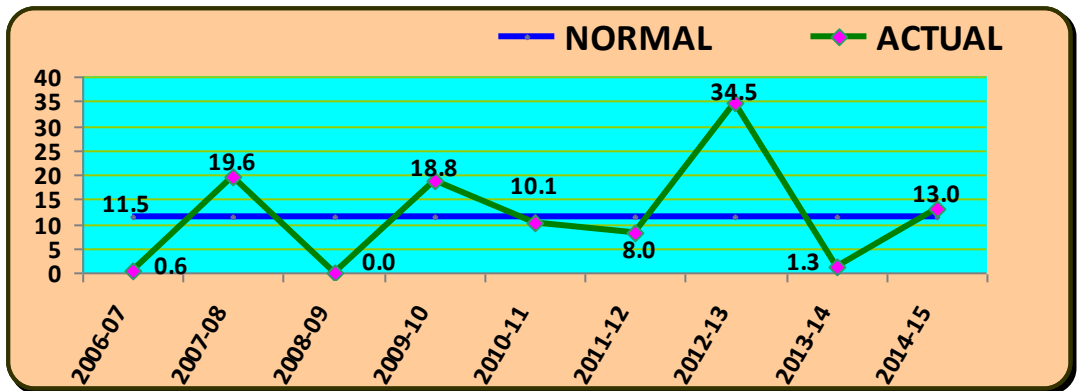

GRAPH : NORTH-EAST MONSOON RAINFALL FROM 2004-05 TO 2014-15

WINTER PERIOD-2014-15 (January- February)

During the Winter Season, Telangana state recorded an average rainfall of 13.0 mm. This is excess by 13% when compared to the normal rainfall of 11.5 mm. The comparison of rainfall recorded during the Winter Season with the normal rainfall shows that the rainfall was recorded in all districts except Hyderabad District, where no rain recorded during this period.

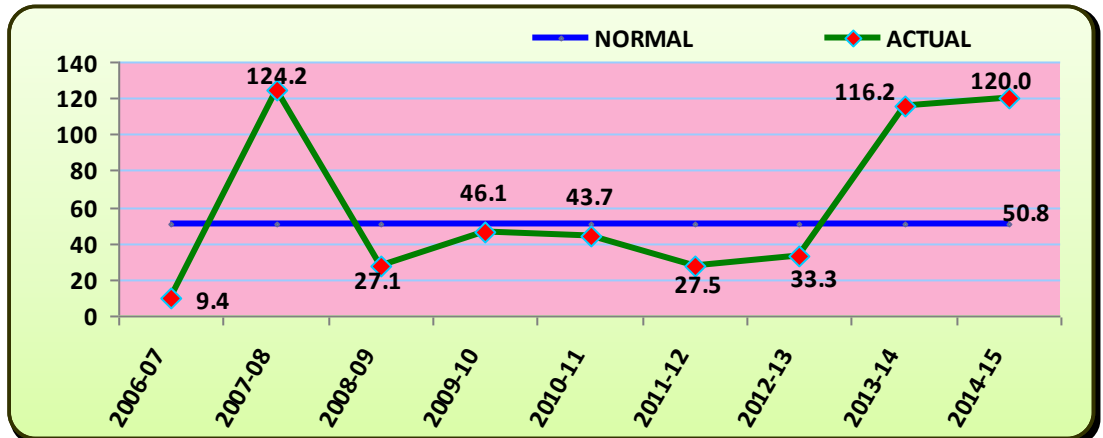

RAINFALL DURING WINTER PERIOD FROM 2006-07 TO 2014-15

HOT WEATHER PERIOD-2014-15

During the Hot-Weather season, Telangana state recorded an average rainfall of 120.0 mm. with excess rainfall of 136.2%. When compared to the normal rainfall of 50.8 mm . The comparison of rainfall recorded during the Hot-Weather season with the normal rainfall shows that the rainfall received was “Excess” in 9 districts and” Normal” in Khammam District.

RAINFALL DURING HOT WEATHER PERIOD FROM 2006-07 TO 2014-15

LAND UTILIZATION

Out of The total Geographical area of 112.08 lakh hectares, The area under forest cover is 25.40 lakh hectares, constituting 22.66 % of the geographic area. The proportion of area under forest was lower than the ideal ratio of one third of total geographical area, about 39.05 percent area is under cultivation (43.77 lakh hectares), 12.50 percent area is under current fallow lands (14.01 lakh hectares), 7.90 percent Land is put to non-agricultural uses (8.85 lakh hectares), 5.42 percent is barren and uncultivable (6.07 lakh hectares) , 7.18 percent falls under other fallows (8.05 lakh hectares) and the remaining 5.93 lakh hectares is under culturable waste, permanent pastures and land under miscellaneous tree crops and groves, Which together accounts for 5.29 % of total geographical area of the state.

THE PATTERN OF LAND USE UNDER VARIOUS CATEGORIES ARE GIVEN BELOW

Sl. no	Category	Area in Lakh hectares	
		AREA	% to Geographical Area
1	Total Geographical Area	112.08	100.00
2	Forest	25.40	22.66
3	Barren and Uncultivable Land	6.07	5.42
4	Land Put to Non-Agri. Uses	8.85	7.90
5	Culturable Waste	1.82	1.62
6	Permanent Pastures and Other Grazing Lands	2.99	2.67
7	Land under Misc. Tree crops, Groves not included in Net Area Sown	1.12	1.00
8	Other Fallow Lands	8.05	7.18
9	Current Fallow Lands	14.01	12.50
10	Net Area Sown*(including Fish Culture)	43.77	39.05

- The land use pattern reveals that the net sown area stood 39.05 % (43.77 lakh hectares) of State's total geographical area of 112.08 lakh hectares and lower than that of 43.92 % (49.23 lakh hectares) during 2013-14.

LAND UTILISATION 2014-15 (Area in Lakh Hectares and Percentage)

- Forest
- Barren and Uncultivable Land
- Land Put to Non-Agri. Uses
- Culturable Waste
- Permanent Pastures and Other Grazing Lands
- Land under Misc. Tree crops, Groves not included in Net Area Sown
- Other Fallow Lands
- Current Fallow Lands
- Net Area Sown* (including Fish Culture)

LAND USE PARTICULARS

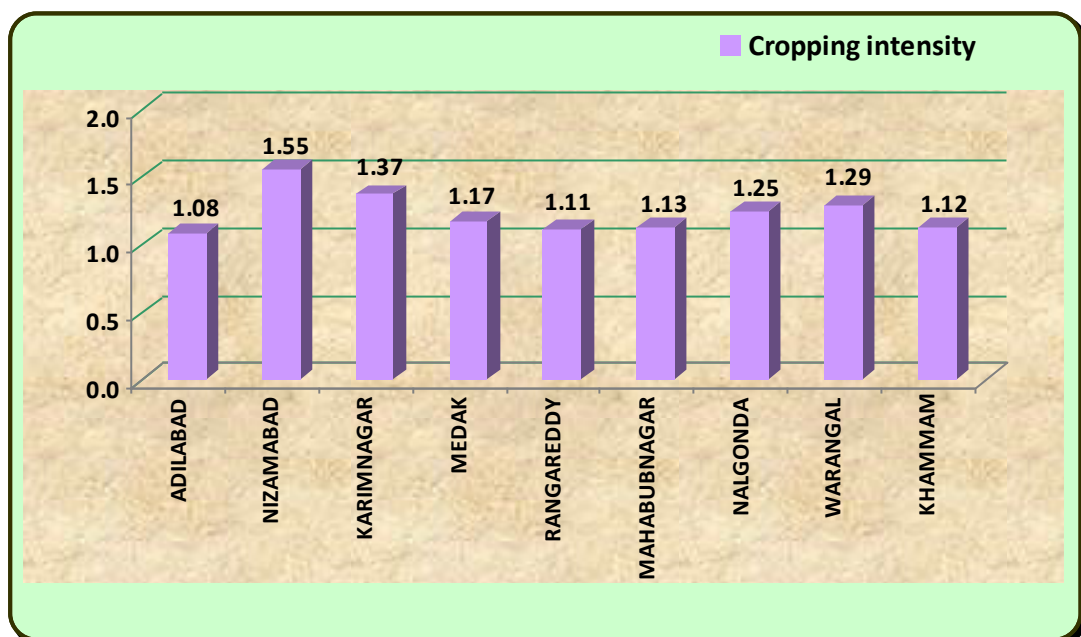

CROPPING PATTERN: It refers to the proportionate area under different crops during agricultural year. The gross cropped area under all crops has decreased to 53.15 lakh hectares in 2014-15 from 62.44 Lakh hectares in 2013-14. While the area under Food crops accounted for 57.72 % and that of non-food crops formed 42.28 % only, of the gross cropped area during the year under report.

CROPPING INTENSITY:

The cropping intensity (the ratio of gross cropped area to net cropped area) is one of the indicators for assessing efficiency of agriculture sector. The cropping intensity for the year 2014-15 decreased to 1.21 from 1.27 in 2013-14, showing a decrease of 4.72 % over previous year. The level of cropping intensity moves in consonance with the behavior of the monsoon and availability of water for irrigation

- The cropping intensity is highest in Nizamabad District (1.55) and lowest in Adilabad district (1.08).

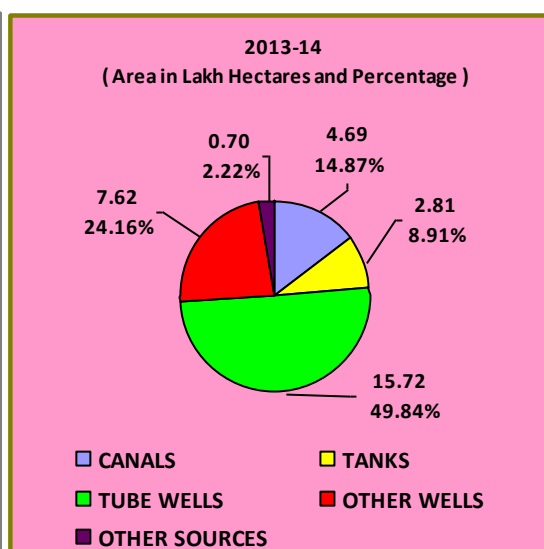

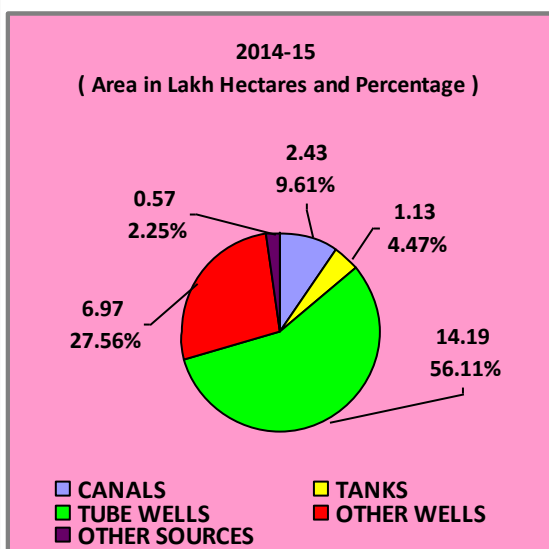

DISTRICT WISE CROPPING INTENSITY IN 2014-15

IRRIGATION STATUS:-The Gross Area irrigated by all sources during the year 2014-15 is 25.29 lakh hectares. This accounted for 47.58 % of the gross cropped area as against 50.32 % during 2013-14. Source-wise gross area irrigated for the years 2014-15 and 2013-14 is given in Table.

SL. NO.	SOURCE OF IRRIGATION	GROSS IRRIGATED AREA (in Lakh Hectares)			
		2014-15		2013-14	
		AREA	% OF GROSS AREA IRRIGATED	AREA	% OF GROSS AREA IRRIGATED
1	Canals	2.43	9.61	4.69	14.87
2	Tanks	1.13	4.47	2.81	8.91
3	Tube Wells	14.19	56.11	15.72	49.84
4	Other Wells	6.97	27.56	7.62	24.16
5	Other Sources	0.57	2.25	0.70	2.22
Total		25.29	100.00	31.54	100.00

- Among sources of irrigation tube wells accounted for 56.11 %, followed by other wells (27.56 %) of total net area irrigated of 25.29 lakhs ha. in 2014-15.

5.1 During the year, the Gross Area irrigated was decreased to 25.29 lakh hectares from 31.54 lakh hectares in 2013-14, the decrease being 19.82 % .

- The net area irrigated for the year 2014-15 is also decreased to 17.26 lakh hectares from 22.80 lakh hectares in 2013-14, the decrease being 24.30 % .
- The details of net area irrigated by different sources of irrigation during the last 5 years in the State as a whole are presented in Annexure-V .
- Source-Wise and District-Wise gross area irrigated, Area irrigated more than once and Net Area irrigated details are presented in Annexure-VI.

5.2. Out of Gross Area irrigated of 25.29 lakh hectares 54.92 % was accounted by Rice alone and followed by 9.61 % for Maize , 8.35 % for Cotton, 5.68 % for Groundnut respectively and the remaining irrigated area was covered by other crops.

- Total food cropped area under irrigation was 82.26 % and non-food cropped area was 17.74%.
- The particulars of crop-wise area Irrigated by different sources in respect of some important crops are presented in Annexure-VII .

IRRIGATION INTENSITY

The irrigation intensity i.e. the ratio of gross irrigated area to net irrigated area , irrigation intensity during the year 2014-15 was 1.47 whereas, it was 1.38 in 2013-14.

- The irrigation intensity is highest (i.e. 1.84) in Nizamabad District followed by Karimnagar (1.59) , Nalgonda (1.52) respectively and lowest being 1.23 in Khammam District.

AGRICULTURE PRODUCTION SCENARIO-2014-15:

As per final Estimates for 2014-15, total production of rice in the state is estimated at 45.45 lakh tones, which is lower by 20.36 lakh tones when compare to the last year's production of 65.81 lakh tonnes.

- Production of Maize estimated as 23.08 lakh tonnes is also a lower when compare to the previous year production of 35.12 lakh tonnes during 2013-14. Production of rice as well as Maize is register considerably lower than their average production levels.
- The production of Cereals & Millets is estimated as 69.55 lakh tones is lower by 32.66 lakh tonnes than the last year's production of 102.21 lakh tonnes and also lower than the average production of last five years.
- Total food grains production estimated as 72.18 lakh tonnes is lower by 30.03 lakh tonnes when compare to the last year's production of 102.21 lakh tones.
- Production of pulses and oilseeds estimated as 2.63 lakh tonnes and 7.22 lakh tonnes respectively are lower by 2.02 million tonnes and 1.57 lakh tonnes respectively over last year's production levels.
- The current year's production of Sugarcane estimated as 33.43 lakh tonnes is lower by 0.33 lakh tones to that of the last year production. The production of Cotton is estimated as 35.83 lakh bales (of 170 kg each) registered a decrease of 6.82 lakh bales over the previous year cotton production . A statement showing crop-wise area and production of foodgrains, oilseeds and commercial crops during the period from 2012

Crops	Area(Lakh Hectares)			Production(lakh tonnes)			Yield(kg/hectare)		
	2012-13	2013-14	2014-15	2012-13	2013-14	2014-15	2012-13	2013-14	2014-15
Rice	14.18	19.95	14.15	46.48	65.81	45.45	3277	3300	3211
Maize	6.63	7.50	6.92	29.44	35.12	23.08	4440	4681	3338

LAND HOLDINGS AND AREA OPERATED UNDER HOLDINGS

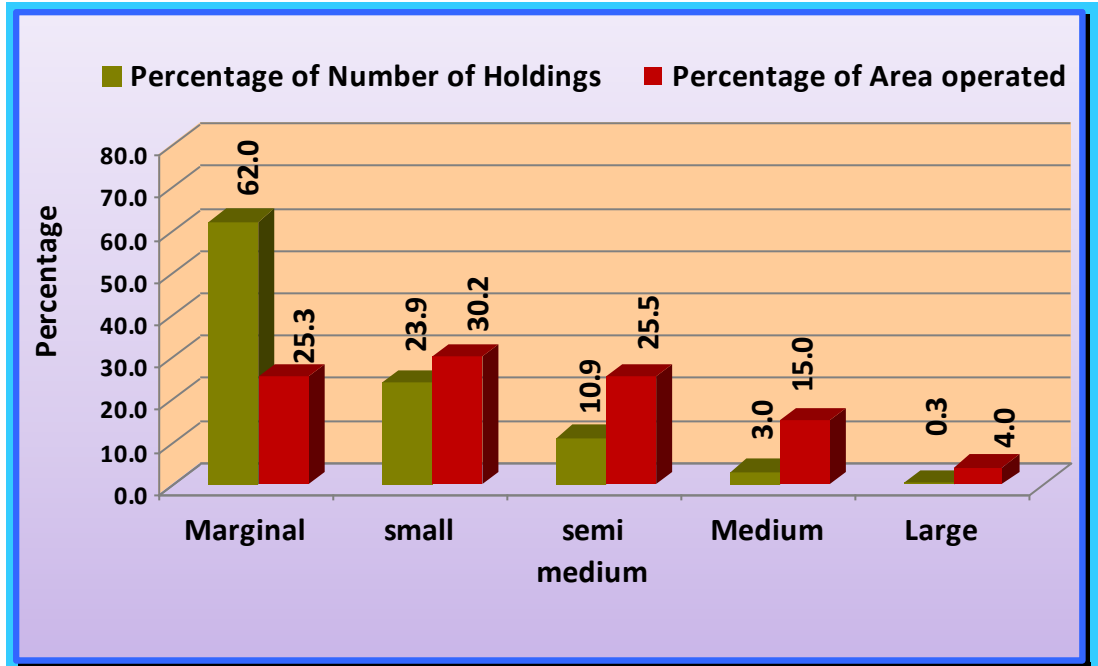

As per the Agricultural Land Holding Census, 2010-11, the number of holdings in the state accounted to 55.54 lakh and the area held by these holdings is 61.97 lakh hectares. The average size of the holdings in the State is 1.12 hectares, which is highly uneconomical to operate. In the State, 62.0 percent of the holdings are marginal (less than 1 hectare) and the percentage of small holdings (1 to 2 hectares) is 23.9%. Thus, marginal and small holdings constitute about 85.9% of total agricultural holdings in the State, making agriculture a subsistence source of livelihood for the majority of the population of the State.

- Percentage of area held by semi medium and small holdings is higher than marginal holdings.
- More than 60% holdings are marginal in Nizamabad, Karimnagar, Medak, Khammam and Warangal districts.
- Average size of land holding is highest (1.40 ha.) for Adilabad District and lowest (0.92 ha.) for Nizamabad District.

PERCENTAGE DISTRIBUTION OF HOLDINGS AND AREA BY SIZE OF HOLDINGS: 2010-11

District Name	Holdings					Area					Average Size of Holding (Ha)
	Marginal	Small	Semi Medium	Medium	Large	Marginal	Small	Semi Medium	Medium	Large	
ADILABAD	49.8	27.7	17.5	4.6	0.4	16.9	28.3	31.9	18.1	4.8	1.40

DISTRIBUTION OF LAND HOLDINGS AND AREA OPERATED ACCORDING TO SIZE CLASSES IS GIVEN IN THE GRAPH BELOW:

AGRO CLIMATIC ZONES

Based on the distribution of Rainfall and Soils, the state has been divided into 4 Agro-climatic zones i.e., 1) Northern Telangana Zone 2) Central Telangana Zone 3) Southern Telangana Zone and 4) High Altitude & Tribal Zone

1.Northern Telangana zone: - This zone includes the districts of Adilabad, Karimnagar and Nizamabad. The annual normal rainfall is 900 mm to 1150 mm mostly from south west monsoon. The maximum and minimum temperatures during south west monsoon range from 21^o C to 25^o C and 32^o C to 37^o C respectively. Red soils are predominant in the zone which includes chalkas, red sands and deep red loams. Very deep Black cotton soils are seen in the Zone.

2. Central Telangana zone: - This zone includes the districts of Medak, Warangal and Khammam Districts and it receives an annual normal rainfall of 800 mm-1150 mm. The maximum and minimum temperatures during south west monsoon range from 21^o C to 25^o C and 22^o C to 37^o C . respectively. Red soils are predominant in the zone which includes chalkas, red sands and deep red loams. very deep black cotton soils are also seen in the zone.

3.Southern Telangana zone: - This zone comprises of the districts of Rangareddy, Hyderabad, Mahaboobnagar and Nalgonda. The annual normal rainfall is 600 mm -780 mm. The maximum and minimum temperatures during south west monsoon range from 28^o C to 34^o C and 22^o C to 23^o C respectively. This zone is a predominantly red soil tract having red with loamy sub-soil i.e., chlakas.

4.High Altitude and Tribal zone: - This zone consists of the areas along the Northern and Eastern borders of the state in the districts of Adilabad and Khammam . These areas are inhabited by Tribals. The annual normal rainfall is around 1400mm and large areas at high altitudes up to 1000mm above mean sea level. The important soils Red sandy loams and Red loams with clay base with very small patches of Alluvial soils. The maximum and minimum temperatures during south west monsoon range from 13^o C to 27^o C and 29^o C to 34^o C and respectively.

AGRICULTURAL STATISTICS AT A GLANCE TELANGANA 2014-15

Sl. No.	Name of the zone	Districts	Soil type	Important crops grown	Normal Rain fall (in mm)
1	2	3	4	5	6
1	Northern Telangana Zone	Karimnagar, Nizamabad, Adilabad	Red Earths with loamy sub soils (Chalkas) and black cotton soils.	Rice, Maize, Soyabean, Cotton, Redgram, Turmeric	900-1150
2	Central Telangana Zone	Warangal, Khammam, Medak	Red earths with loamy soils (Chalkas), Red sandy soils and BC soils in pockets.	Cotton, Rice, Maize, Greengram, Mango, Chillies,	800-1150
3	Southern Telangana Zone	Mahabubnagar Nalgonda Rangareddy and Hyderabad	Red soils chalks.	Cotton, Rice, Redgram, Maize, Greengram,	600-780
4	High Altitude & Tribal Areas Zone	High Altitude & Tribal Areas of Adilabad And Khammam.	Red sandy loams and patches of all Arial soils.	Coffee, Pepper, Chillies, Rice Cotton and Horticulture crops.	1400 Around

4	Other Food Crops	3.44	1.11	4.55	3.50	1.16	4.66
5	Total food crops	21.44	9.24	30.68	25.54	13.43	38.97
6	Total non-food crops	20.31	2.16	22.47	20.86	2.61	23.47
7	Gross Area sown	41.75	11.40	53.15	46.40	16.04	62.44

The area under food grains is decreased to 26.13 lakh hectares during 2014-15 as against 34.31 lakh hectares in 2013-14 the decrease being 23.84 % over previous years area. The decrease in area under foodgrain crops is due to non receipt of sufficient water in irrigation sources and untimely rains. The area and production of food grains in the state for the last five years are shown below.

TABLE - 2

SL.N O.	YEAR	AREA (IN LAKH HECTARES)			PRODUCTION (IN LAKH TONNES)		
		KHARIF	RABI	TOTAL	KHARIF	RABI	TOTAL
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
1	Average of preceding 5 years	20.55	10.39	30.94	49.92	31.83	81.75
2	2010-11	22.24	12.19	34.43	53.73	38.87	92.60
3	2011-12	21.71	9.38	31.09	48.61	26.40	75.01
4	2012-13	19.68	8.68	28.36	54.91	27.51	82.42
5	2013-14	22.04	12.27	34.31	65.28	41.58	106.86
6	2014-15	18.00	8.13	26.13	44.72	27.46	72.18

AREA UNDER TOTAL CEREALS & MILLETS:

The area under cereals & millets is decreased by 6.70 lakh hect. in 2014-15 over previous year i.e., 2013-14, and area under pulses decreased by 1.48 lakh hectares in 2014-15 when compared with that of 2013-14 .

AREA UNDER KHARIF FOOD GRAINS CROPS :-

The area under food grains in kharif 2014-15 was 18.00 lakh hectares as against 22.04 lakh hectares in 2013-14 showing a decrease of 18.33 %.

AREA UNDER RABI FOOD GRAINS CROPS :-

The area under foodgrains in Rabi 2014-15 was 8.13 lakh hectares as against 12.27 lakh hectares in 2013-14 , showing a decrease of 33.74 %.

AGRICULTURAL STATISTICS AT A GLANCE TELANGANA 2014-15

The season-wise and crop-wise area brought under food grains during 2014-15 and 2013-14 is shown below.

TABLE-3

AGRICULTURAL STATISTICS AT A GLANCE TELANGANA 2014-15

The production under foodgrains during 2014-15 , is decreased by 32.45 % when compared to previous year.

The season wise and crop wise production under foodgrains during the year 2014-15 and 2013-14 is shown below.

TABLE-4 (Production in Lakh Tonnes)

N = NEGLIGIBLE

6.1.6 KHARIF FOODGRAINS PRODUCTION:

The Kharif foodgrains production is 44.72 lakh tonnes in 2014-15 as against 65.28 lakh tonnes in 2013-14, showing a decrease of 31.50 % the decrease is due to decrease in area under foodgrain crops and decrease in Yield rate of Paddy, Maize , Redgram and Greengram etc., crops during the current year Kharif season.

6.1.7 RABI FOODGRAINS PRODUCTION:

The production of foodgrains during Rabi 2014-15 is decreased to 27.46 lakh tonnes from 41.58 lakh tonnes in 2013-14, showing a decrease of 33.96 % when compared to previous year.

The decrease of production in food grains in Rabi season is attributed to significant decrease in area of Cereals and Millets and Pulses crops

6.1.8 Productivity of Foodgrains:

The productivity of food grain crops in 2014-15 and 2013-14 are given in Table-5.

6.1.9 DISTRICT-WISE AREA , PRODUCTION AND YIELD DATA OF CROPS:

Crop-wise, District-wise Area, Production and Productivity are presented in ANNEXURE-7.

TABLE - 5

RICE:

Rice, the Major Staple food grain crop, which is predominantly irrigated, one and transplanted in both Kharif and Rabi seasons in all the Districts of the state. It account for 26.63 % of the total cropped area in the state during 2014-15. The details of Area, Production and Productivity per hectare of Rice crop from 2010-11 to 2014-15 are given below.

J O W A R :

Jowar is the principal foodgrain crop in the state which is sown in both Kharif and Rabi seasons mostly under rainfed conditions. The area under Jowar is 0.79 lakh hectares in the state during 2014-15. This crop is grown in all the Districts and predominantly grown in the districts of Mahabubnagar, Adilabad, and Medak which together accounts for 72.04 % of the total area in the state during the year 2014-15 Mahabubnagar District alone accounted for 31.34 % of the state total area. The area, production and productivity of Jowar for the last five years i.e., from 2010-11 to 2014-15 are shown below.

TABLE-7
AREA, PRODUCTION AND PRODUCTIVITY OF JOWAR FROM 2010-11 TO 2014-15

SL. NO.	YEAR	AREA (IN LAKH HECTARES)			PRODUCTION (IN LAKH TONNES)			PRODUCTIVITY (IN KGS/HECTARE)

BAJRA:

Bajra crop is predominantly grown in the Districts of Nizamabad, Mahabubnagar, Adilabad and Karimnagar which together accounted for 95.65 % of the total area in the state during 2014-15 , Nizamabad District alone accounted for 54.05 % of the state total area . The area, production and productivity of Bajra crop for the last five years i.e.,from 2010-11 to 2014-15 are shown below.

TABLE-8

RAGI:

Ragi crop is grown in both Kharif and Rabi seasons and predominately grown in the Kharif Season in the state. Total area under this crop in the state is 0.01 lakh hectares and grown in Mahabubnagar, Rangareddy, Adilabad, Medak and Nizamabad Districts only. During the year 2014-15, Mahabubnagar District alone accounts for 71.05 % of the state area under the crop. The details of area production and productivity of Ragi crop from 2010-11 to 2014-15 are given in Table-9.

TABLE-9
AREA, PRODUCTION AND PRODUCTIVITY OF RAGI CROP DURING
2010-11 TO 2014-15

MAIZE :

This crop is mostly grown in all the Districts in Telangana state. The Districts of Mahaboobnagar, Medak, Warangal and Karimnagar are predominantly growing this crop and accounted for 76.01 % of the total area under the crop in the state during 2014-15. Mahabubnagar District alone accounted for 26.39 % of the state area. The area, production and productivity of Maize crop from 2010-11 to 2014-15 are given in Table-10.

**TABLE-10
AREA, PRODUCTION AND PRODUCTIVITY OF MAIZE CROP
DURING 2010-11 TO 2014-15**

PULSES :

Redgram, Bengalgram, Greengram, Blackgram and few other pulses are raised in the state. Redgram and Bengalgram are mostly confined to Kharif and Rabi seasons respectively, while the remaining pulses are grown both in Kharif and Rabi seasons. The area under these pulses accounted for 7.68 % of the total cropped area and 15.62 % of the total area under foodgrain crops in the state during 2014-15 . 2.63 lakh tonnes of production of pulses produced in the state during 2014-15 . The production under Redgram, Bengalgram, Greengram and Blackgram together accounted for 96.87 % of the total production of pulses. Productivity of Bengalgram crop increased during the year 2014-15. The area, production and productivity of pulses for the last 5 years are given in Table-11.

OIL SEEDS :

Telangana is one of the predominant state in the country in growing oil seed crops like Groundnut, Sunflower and Castor extensively.

The area under oil seeds excluding Coconut Crop during 2014-15 was 5.00 Lakh hectares which constituted 9.41 % of the total cropped area in the state. The area under Groundnut alone accounted for 30.95 % of the total area under oil seeds crops during 2014-15. Out of 6.71 lakh tonnes of production of oil seeds, Groundnut and Soyabean, accounted for Major production of the total oil seed production in the state. The area, production and productivity for the last five years are given in the Table -12.

5. SUGARCANE: (Coming for harvest) (Cane & Gur)

Year	AREA (IN LAKH HECTARES)	PRODUCTION (IN LAKH TONNES)		PRODUCTIVITY (IN KGS/HECT.)	
		CANE	GUR *	CANE	GUR *
2010-11	0.40	30.66	3.09	76981	7770
2011-12	0.45	38.44	3.89	84593	8570
2012-13	0.41	35.74	3.62	87430	8854
2013-14	0.39	33.76	3.44	85898	8751
2014-15	0.38	33.43	3.35	87654	8783

* Gur production is arrived from cane production basing on cane to Gur conversion ratio provided for Sugar Cane (P) (10.020 %) and Sugar Cane (R)(10.240 %).

1.GENERAL CROP ESTIMATION SURVEYS ON FOOD & NON-FOOD CROPS

The objective of Crop Estimation Surveys is to obtain the estimates of average yield per hectare (productivity) and total production of principal crops, both at District and State levels by conducting crop cutting experiments . The scheme is being implemented from 1950-51 onwards in the State.

A crop cutting experiment for any specified crop involves marking of experimental plot of specified size in the selected field, harvesting, threshing and weighing of the produce obtained from it. In a specified number of cases, the produce so obtained will be stored and dried for a further period in order to determine the weight of the dried produce. The following crops are covered under this survey.

Sl. No.	Food Crops	Non-Food Crops
1	Paddy (Rice) (Kharif & Rabi)	Groundnut (Kharif & Rabi)
2	Jowar (Kharif & Rabi)	Sesamum (Kharif & Rabi)
3	Bajra (Kharif)	Castor (Kharif)
4	Maize (Kharif & Rabi)	Sunflower (Kharif & Rabi)
5	Ragi (Kharif)	Soyabean (Kharif)
6	Korra (Kharif)	Cotton (Kharif)
7	Redgram (Kharif)	Chillies (Kharif & Rabi)
8	Greengram (Kharif & Rabi)	Sugarcane (Kharif)
9	Blackgram (Kharif & Rabi)	Tobacco (Rabi)
10	Horsegram (Kharif & Rabi)	
11	Bengalgram (Rabi)	

2.METHODOLOGY:

Selection of Villages for Crop Cutting Experiments:

Common villages are now being selected for both food and non-food crops and for Kharif and Rabi seasons. The sample villages for conducting CCE are drawn from the villages selected under the TRAS programme during current year. If sample size (i.e.) villages under a particular crop exceeds the number of villages in the current year's TRAS list, the remaining sample villages should be selected from the balance villages of the mandal.

Example: If there are 20 villages in a mandal, every year, 4 villages would be covered under TRAS. If the sample size is 6 villages, the remaining 2 villages will be selected from balance 16 villages of mandal on random basis. During the Kharif season, experiments are planned separately for the Irrigated and un-irrigated categories of paddy.

Recording of Yield data:

1. The cleaned produce should be weighed to the nearest decagram and the results should be recorded in form II.
2. In case of Paddy, weight of the undried grain from the plot should be weighed.
3. For Jowar, Bajra, Ragi, Maize, Korra crops, weight of the undried cobs should be obtained from the plot.
4. Redgram, Blackgram, Greengram, Horsegram, Sesamum, Soyabean weight of dried seed after threshing is obtained.
5. Groundnut - weight of undried pods from the plot.
6. Castor – weight of capsules for all pickings.
7. Sugarcane – weight of cane from the plot
8. Chillies – weight of fresh chillies from each picking.
9. Tobacco – number and weight of green leaves for Tobacco (Virginia) for each picking. In case of Tobacco (Natu) number and weight of green leaves.
10. Sunflower- Extracted seed should be weighted.

DRIAGE :

Immediately after the harvest is over, record the weight of the harvested produce, un-dried grain in the case of Paddy, un-dried cobs in the case of Jowar, Bajra, Ragi, Korra and Maize, un-dried pods of Groundnut weight of capsules of 1st and 2nd pickings for Castor, and weight of Kapas for 1st and 2nd pickings of Cotton in Form II. In case of Tobacco the number and weight of leaves picked in each picking are recorded in the appropriate columns of Form II and III. A final single weighment of the seed obtained in different pickings is also made on the final day by way of cross check. The produce will then be returned to the cultivator.

3.Planning and Designing:

A **Multistage Stratified Random Sampling** with the Mandal as the stratum, villages within the stratum as first stage units, the field in the selected village as the secondary unit of sampling and the plot of the specified size within the field as the ultimate unit of sampling has been adopted for carrying out crop cutting experiments.

The sample size i.e. the total number of sample villages for each crop will be fixed at the State level by the Directorate so as to give estimates of average yield with a desired degree of precision at the State level. The total number of sample villages will then be allocated to different districts and different Mandals within a district in proportion to the area under the crop in the District/Mandal. The required number of villages arrived at on the above lines will then be selected at random from the list of villages selected under T.R.A.S. Programme during the year. From each selected village two experiments shall be conducted and for this purpose two survey numbers growing the crop will be selected at random. In the selected field a plot of the specified size will be located randomly for conducting the crop cutting experiment. The procedures and techniques involved in the Survey have been finalized based on the results of pilot surveys carried out by the "Indian Agricultural Statistics Research Institute" (IASRI), New Delhi.

At State level, based on the Percentage Standard Error obtained for a crop during the previous year, the plan size of crop will be decided.

District level: The sample size at State level will be distributed to the districts in proportion to the area under the crop in the district. For this purpose, previous 3 years average area of the crop will be considered.

Mandal level: Similarly, the sample size at District level will be re-distributed among the mandals in proportion to the area under the crop in the mandal. For this purpose, previous 3 years average area of the crop will be considered.

Primary Workers:

For conducting the crop cutting experiments, the field staff is drawn from the Statistics, Agriculture, Horticulture and Sugarcane Departments. The Assistant Statistical Officers of DES working at Tahsil Office, AEOs/Agriculture Officers, Horticulture Officers for Horticulture crops, Sugarcane Inspectors for Sugarcane crops are generally be the primary workers/supervisors for conducting of Crop Cutting Experiments .

4.CROP INSURANCE SCHEME

Object : Crop insurance scheme is primarily formulated and introduced by Govt of India to safeguard the interest of the farmers and to protect them against the element of risk and to mitigate the losses incurred by the farmers on account of natural calamities and stabilization of farm income. The risk insurance will be provided to cover yield loss due to following non-preventable risks.

A. Natural Fire and Lightning , **B.**Storm, Hailstorm, Cyclone, Typhoon, Tempest, Hurricane, Tornado etc. **C.** Flood, Inundation and Landslide. **d.** Drought, Dry spells. **e.** Pests/ Diseases etc.

In India Crop Insurance Scheme for the first time was introduced during 1972 in limited pockets of the country covering limited crops. This was optional for both states and as well as farmers. This was implemented on “Individual approach”.

Taking the demand for the scheme into consideration, the Govt. of India felt the need to make it compulsory in respect of loanee farmers in all the states. Taking the perspective in view in 1976 a committee was constituted under the Chairmanship of Professor DandeKar to go into details and modalities to make “Crop Insurance” more effective and useful to the farmers.

The recommendations of the committee were taken by the Govt. of India and the existing crop insurance scheme was revised and a farmer friendly “CCIS” (Comprehensive Crop Insurance Scheme) was implemented from Kharif 1985. The AP State Govt. as opted for the scheme and implemented during Kharif 1985 and being continued till 1998-99.

a) National Agriculture Insurance Scheme:

This scheme was introduced in the country in the year 1999-2K replacing CCIS. In AP this was introduced in the year 2000-01 and being continued. This scheme basically on the same principle as that of CCIS as regards risk coverage and yield index. However, under the scheme unlike CCIS, farmers growing notified crops and not taking loans from financial institutions can also opt for coverage. The district wise coverage of crops for the year Rabi 2014-15 and Kharif 2014-15 is as given below:

TABLE-2 A
NOTIFICATION OF AREAS PROPOSED UNDER NATIONAL CROP INSURANCE PROGRAMME FOR KHARIF 2014

Sl. No.	District	No. of crops Notified	Crops Notified
1	Adilabad	10	1. Rice 2.Jowar 3.Maize 4.Redgram 5.Greengram 6.Blackgram 7.Soybean (Village made as Insurance Unit) 8.Chillies (UI) 9.Turmeric 10 Cotton (UI)

6	Mahaboobnagar	5	1.Rice (Village made as Insurance Unit) 2.Jowar(UI) 3.Bengalgram 4.Groundnut 5.Sunflower
7	Nalgonda	4	1.Rice (Village made as Insurance Unit) 2.Jowar(UI) 3.Blackgram 4.Groundnut
8	Warangal	5	1.Rice (Village made as Insurance Unit) 2.Chillies (I) 3.Groundnut 4.Jowar (UI)5.Maize
9	Khammam	7	1.Rice (Village made as Insurance Unit) 2.Jowar (UI) 3.Maize 4.Blackgram 5.Greengram 6. Groundnut 7.Chillies(I) 6.Groundnut 7.Red Chillies

b). Modified National Agricultural Insurance Scheme (MNAIS)

As per instructions of the Govt. of India, Modified National Agricultural Insurance Scheme was introduced on pilot basis during Rabi 2010-11 in Warangal district and continued till Rabi 2013-14. Rice was notified crop covered under 'Village made as Insurance Unit'. During Rabi 2014-15, in all districts of Telangana except Hyderabad , Rice is notified crop under Modified National Agricultural Insurance Scheme with Village made as Insurance Unit . The planning details pertaining to Rabi 2014-15 are given separately in Table III Apart from the yield loss, the following risks will be covered under this new scheme.

Prevented sowings/planting risk: In case farmer is prevented from sowing/planting due to deficit rainfall or adverse seasonal conditions, such insured farmer will get up to 25% of the sum insured.

Localized risks: Hailstorm, landslide, etc. localized risks will also be covered under the scheme.

Post harvest losses: The insurance coverage is available even after harvest of the crop up to a maximum of two weeks from the date of harvest.

NAIS and MNAIS in a district are mutually exclusive.

6. VILLAGE INSURANCE SCHEME:

The Village Insurance scheme is an innovative and first of its kind which was initiated in the combined state and is being implemented In Telangana State also, which was newly formed state in India.

This scheme was initiated first during Kharif 2005 on pilot basis in 2 Districts Viz., Mahabubnagar and Karimnagar in Telangana and continued in Kharif 2006. During Kharif 2007, the scheme was extended to one more district i.e. Medak District of Telangana. It has been decided to implement Village Insurance Scheme in the entire Telangana state (except Hyderabad) from Kharif 2008 onwards with one predominant crop existing in each District. Though during 2014 Kharif, Government of India (GOI)decided to implement Modified National Agricultural Insurance Scheme (MNAIS) in entire country, Government of Telangana State has decided to implement NAIS with one predominant crop as notified crop under VILLAGE INSURANCE SCHEME. The crops covered under NAIS with " Village made as insurance unit " in Telangana are Paddy, Maize and Soyabean.

AGRICULTURAL STATISTICS AT A GLANCE TELANGANA 2014-15

The Primary Workers for Village Insurance Scheme are Agriculture Extension Officers (A.E.Os) of Agriculture Department and the personnel engaged purely on part time basis for this specific purpose.

A village with an area of minimum 100 Hectares under the selected crop is notified as an independent unit. If the area of the selected crop in a village/Mandal is less than 100 Hectares, then contiguous village (s) / Mandal (s) were grouped to form an Insurance Unit. Insurance units are classified into 5 different categories according to the number of villages existing in the unit and experiments are conducted as per the category shown below.

Category code	Category Description	No of Experiments conducted
1	Single Village as a unit	4
2	More than one village but less than 6 villages	4
3	More than 5 villages but not entire mandal	10
4	Entire Mandal	10
5	Group of Mandals	16

TOTAL			5043	21282

AGRICULTURAL STATISTICS AT A GLANCE TELANGANA 2014-15

During Kharif 2014, 5,043 Insurance Units were constituted to conduct 21,282 experiments under three selected crops viz., Paddy, Maize and Soyabean. The planning details of Kharif 2014 are given separately in Table I. During Kharif 2015, after reorganising units in Khammam district, a total of 4,965 Insurance Units are constituted to conduct 21,036 experiments under three selected crops viz., Paddy, Maize and Soyabean. The planning details pertaining to Rabi 2014-15 are given separately in Table II. The planning details pertaining to Kharif 2015 -16 are given separately in Table -III.

CONVERSION COEFFICIENTS

For changing British Units of Weight, Length and Capacity into Metric Units.

I. Standards of Weights

1 Oz	28.3495 Grams
1 Gram	0.0352740 Ounces, 0.09 Tula
1 Pound	0.45359 Kilogram
1 Kilogram	2.20462 Pounds (Lb),1000 Grams, 35.274 Ounces (Oz)
1 Tonne (Metric Ton)	0.98420 Tons, 1000 kilograms 10 Quintals
1 Ounce	28.350 g
1 Ton	1.01605 Metric Tons, 2240 Lbs.
1 Tonne (Metric Tonne)	1000 Kgs, 10 Quintals
1 Pound	0.037324 Metric Tons, 82.2857 Lbs. 0.4536 Kg ,0.3732 Quintal
1 Cwt	0.5010 Quintal
1 Seer	0.9331 kilogram
1 Bale of Cotton lint (392 Lbs)	0.1771 Metric Ton
1 Metric Ton	5.641 Bales
1 Bale of Jute (400 Lbs).	0.181436 Metric Ton
1 Metric Ton	5.5166 Bales of Jute

II. Standards of Area

1 Hectare	2.47105 Acres , 1000 Square Meters
1 Acre	0.404686 Hectare, 4840 Sq. Yards 4046.9 Sq . Meters (43560 Sq. ft.)
1 Sq.Mile	640 Acres, 2.59 Sq.Kilometres
1 Sq.Kilometre	0.3861 Sq.Mile, 100 Hectares 247.105 Acres
1 Sq.yard	0.8361 Sq.Metre, 9 Sq.feet
1 Sq.Metre	1.1960 Sq. Yards, 10.764 Square Feet
1 Sq . Foot	0.0929 m ²
1 Km ²	100 Hectares (ha)

III. Standards of Length

1 Kilometre	0.62137 Mile, 3280.8 Feet, 1000meters ,1093.6 yards
1 Metre	1.0936 Yards, 39.36996 Inches, 3.2808 Feet
1 Yard	0.9144 metre, 91.44 Centimeters, 36 Inches
1 Inch	25.4 Millimetres, 2.54 Centimeters, 0.0254 Meters
1 Foot	30.48 Centimeters , 0.3048m
1 Millimetre	0.0328 Inch
1 Mile	1.6093 Kilometers
1 Chain	100 links, 20.1168 Meters, 66 Feet
13 Steps	10 Meters (Approx)
7 Steps	5 Meters (Approx)
